

X

Kevin Lewis

Congratulations on getting ahead
Because you were in the middle,
But now you're going to a higher place,
Except in math, because
You didn't give us the correct change
And you owe us another year.

They shoved pi down my throat
As a price I had to pay for my Sin,
Cosine, and whenever I went off on
Tangents and spent class time drawing.
If $x =$ grade level, and $y = 1$ year behind
Then $x-1 =$ my math level.

Congratulations on getting ahead,
Because you were at a higher place,
But now you're going to college,
Except in math, because
You didn't pay them enough
And we're here to collect it all over again.

If $x =$ grade level,
And $y = 4$ years they set me back
Then $x-y = 13-4 = 9$
Take the root, 3
Subtract it from $y = 4$
And I was put back at square 1.
